Stage area dimensions: 12m x 8m minimum playing.

Lighting requirements: 1 x ETC Ion Lighting Console. A venue specific plan will be drawn up for each venue.

Sound requirements: 4 x speakers and 1 x large sub-woofer.

The show is operated from a laptop (provided by the company); we require 4 lines to the mixing desk and individual channels for each speaker. Sound control position is at the side of the audience. A clean 16A supply is required.

Number in touring company: 4.

Touring availability: 2013 onwards.

Any additional touring info: The set is a collection of kinetic sculptures (sketches and plans available) surrounding a 2mx2mx2m faraday cage housing a tesla coil. There are three 2.4mx2.4m steel panels providing the backdrop. 9 of the kinetic sculptures are floor mounted and are free standing, 4 ceiling mounted kinetic pieces these ideally require a rig height of 4.4m.

The Tesla coil is operated from a standard 13A socket. In all the installation can be run from 3x16A outputs.

A full risk assessment will be provided for the Tesla Coil. However the room must have ventilation or hole for ventilation to be fitted for use during show and audience members must be no closer than 3 meters from faraday cage.

Full tour pack and plans on request.
