+44 (0)7927 635 389

Stage area dimensions: Minimum stage area 4m x 3m. The space needs to be well isolated acoustically - with no aircon noise or bleed from other venues. Good ceiling height preferred and must be able to be blacked out.

Lighting requirements: The stage is mostly lit by practical lighting that is part of the set (artist supplies). Some minimal front lighting is required: two fresnels and two spots or PCs. A house technician is required to operate minimal lighting cues and possibly some audio in larger houses (see below).

Sound requirements: **SAVED** is a multi-speaker amplified environment requiring no further audio reinforcement for audiences up to 120. In larger houses the house PA is used. All sound operated by performer from stage.

Video requirements: N/A.

Number in touring company: 3 - artist, production manager, producer.

Touring availability: Available from Autumn 2021 onwards.

Any additional touring info:

The show is quite meditative, making it suitable for those with sound sensitivities. There are no sudden loud surprises. Vision impaired audiences can be invited to tour the stage set before the performance to touch the various sound making elements of the show.
